

Kinematics

(7)

37. The velocity of a motor cycle increases by an acceleration of 2 ms^{-2} . and becomes 20 ms^{-1} in 5 seconds. Find the initial velocity of the car.

DATA :-

Initial velocity = ?

Final velocity = 20 ms^{-1}

Time taken = 5 secs

Acceleration = 2 ms^{-2}

SOLUTION :-

$$a = \frac{v_f - v_i}{t}$$

Al-Saudia
Virtual Academy

$$v_f = v_i + at$$

$$20 = v_i + (2)(5)$$

$$20 = v_i + 10$$

$$v_i = 20 - 10$$

$$v_i = 10 \text{ ms}^{-1}$$
